Pull Request or Patch supplied:	No	**Resolution:**	fixed
Easy fix?:	No	**Copied to github as #:**	11133

Description

When you open a saved project and some of the layers in it have been moved, you are asked for the new location. In case there is more than one layer missing, you are asked for each of them, making it quite annoying. Would it be possible to implement a recurrent search for all missing layers in the directory you give for the first layer?

While I think this would be a very useful enhancement, I am changing the type to: enhancement.
