QGIS Application - Bug report #10769
r.terraflow error

2014-07-01 12:30 PM - baditaflorin -

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	GRASS		
Affected QGIS version:	2.4.0	**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	worksforme
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	19151

Description

i don`t know how to save the log, i just have the printscreen

History

#1 - 2014-07-02 02:21 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Open to Closed

- File dem_clipped.tif added

The module works fine, just tested on both Window and Linux. Try the attached dem for example.

The fact that you get that message does not mean that the module is not working, it usually means that for some reason the output (or one of them) was not created. This can happen for many reasons: wrong inputs, wrong parameters, problem in the native tool (a GRASS one in this case), etc.

To be sure is a QGIS issue you must copy/paste the log here (from the window in the screenshot or from "processing -> history and log").
