

## QGIS Application - Feature request #1077

### Symbols area scale

2008-05-09 12:41 AM - pls -

<b>Status:</b> Closed	
<b>Priority:</b> Low	
<b>Assignee:</b> nobody -	
<b>Category:</b> Symbology	
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> fixed
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 11137
<b>Description</b>	
<p>Actually, a size can be manually specified for each symbol; it could be helpful to fetch that size from a field of the vector layer's database instead.</p> <p>There could be also an option that allows to scale the symbol's size according to a scale factor; this could be employed to visualize the same symbol associated to cities with different sizes according to their population rank, for example (see attachment).</p>	

### History

#### #1 - 2008-07-09 01:29 PM - Tim Sutton

- Resolution set to fixed

- Status changed from Open to Closed

This feature has been added in 0.10.0 - how does your request differ from what we have already?

I'll close this request - reopen if I'm misunderstanding and you are actually looking for something different to what we have.

Regards

Tim
