

QGIS Application - Feature request #10867

Allow to select CRS for all files selected for add to Canvas

2014-07-10 01:48 PM - Antonio Locandro

Status: Closed	
Priority: Normal	
Assignee:	
Category:	
Pull Request or Patch supplied:	Resolution: worksforme
Easy fix?: No	Copied to github as #: 19235
Description	
<p>There are situations where you have several files to add to canvas but QGIS doesn't detect CRS for any reason. Often you get a dialog to select this but if you add several files at once it gets pretty tiresome</p> <p>I propose that when you select the CRS for the first file and hit Ok another dialog shows up and asks for</p> <ul style="list-style-type: none">- Apply this CRS to all selected files which do no have CRS information- Apply only to this file, then it will ask for each individual file the CRS file (current behaviour) <p>It should only modify files that have no CRS associated and only if 2 or mores files are selected</p>

I think that the options in

settings -> options -> CRS -> CRS for new layers

do pretty much what you ask -> if a layer does not have an explicit CRS then QGIS can give it automatically the project CRS or any other project at user choice.

#2 - 2014-07-11 10:24 AM - Antonio Locandro

True, that is a workaround but then if layers are in different project CRS than project and I want to reproject that wouldn't work

Anyway it's not critical but nice to have

I don't understand. QGIS allows you (for each layer that does not have an **explicit** CRS):

- choose manually the CRS

- give automatically the layer the project CRS
- give automatically the layer a CRS of your choice

reprojection can then be ON or OFF, but this is another option.
