Category:			
Affected QGIS version:	2.4.0	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	invalid
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	19258

Description

There really should be some explanation about what's going wrong:

"Could not draw Google Streets because" <and then nothing>

as documented by the following screenshot: https://twitter.com/mapdx/status/488912922937397248/photo/1

If it's the plugin's fault, at least display that it's a plugin issue.

History

#1 - 2014-07-15 09:45 AM - Jürgen Fischer

- Status changed from Open to Feedback

Please include steps to reproduce. The string only appears in master and 2.4 in obsolete translations. It's active in 2.2 - does this apply to 2.4 at all?

#2 - 2014-07-15 10:23 AM - Matt Wood

Error was produced in 2.2 while attempting to add google satellite imagery from openlayers to a map that already contained google streets, gpx files, shapefiles and geojson files.

#3 - 2014-07-15 10:57 AM - Jürgen Fischer

- Resolution set to invalid
