QGIS Application - Bug report #10963

Processing: (vector) "convert format" tool does strange things/freezes with many data types as inputs and with shapefiles as output format

2014-07-28 07:12 AM - Giovanni Manghi

Status: Closed Priority: Normal

Assignee: Giovanni Manghi
Category: Processing/GDAL

Affected QGIS version:masterRegression?:NoOperating System:Easy fix?:No

Pull Request or Patch shapplied: Resolution: fixed/implemented

Crashes QGIS or corrubts data: Copied to github as #: 19311

Description

In the Processing toolbox there is tool "convert format" that should allow convert from/to different data types.

I tested (and 2.4 and master) converting TO shapefile different data type as inputs and the result are seldom right (if any).

My test cases:

- +) Postgis to shape. Windows: QGIS freezes, Linux: the converted layer is not the input one, but **another** (even NOT in the QGIS project) available in the same database/connection
- +) Similar results if the input layer is a WFS layer
- +) Similar results if the input layer is Spatialite, minus the freeze under Windows
- +) with GPX as input it gives as error

Algorithm Convert format starting...
