

QGIS Application - Bug report #11010

raster NaN value transparency

2014-08-05 08:06 AM - Rob Verhoeven

Status: Closed	
Priority: Normal	
Assignee:	
Category: Rasters	
Affected QGIS version: 2.4.0	Regression?: No
Operating System: linux	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: end of life
Crashes QGIS or corrupts data: No	Copied to github as #: 19352
Description	
<p>The 2.x versions of QGIS apparently do not treat NaN (Not A Number) floating point values as transparent background values. Also the string 'nan' is not recognised by the 'Additional no data value' field in the layer properties dialog. Old versions of QGIS were supporting this nan value.</p> <p>Is there a work-around for this problem?</p> <p>Thanks!</p>
