

QGIS Application - Bug report #11049

Wrong properties statistics and style minimum and maximum for grids

2014-08-13 07:36 PM - Miroslav Umlauf

Status: Closed	
Priority: Normal	
Assignee:	
Category: Rasters	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: end of life
Crashes QGIS or corrupts data:	Copied to github as #: 19385
Description	
<p>I have geotif grids created by GDAL/QGIS (1 band, Float32) which come up with wrong minimum and maximum values in QGIS. Very dangerous problem for me actually.</p> <p>As example one grid with double checked min/max values: minimum: 0, maximum: 13.832950</p> <p>In the properties statistics of QGIS: STATISTICS_MAXIMUM=8.1215000152588 STATISTICS_MEAN=0.70247567682259 STATISTICS_MINIMUM=9.999997171807e-010 STATISTICS_STDDEV=1.2959636169154</p> <p>Load min/max in style tab in QGIS: Min: 1e-09 Max: 8.1215</p> <p>The same if I make 1e-09 as additional no data value in transparency tab: Min: 1e-08 Max: 13.8329</p> <p>Attached image: Proof that grid has values over 8.1215 (10 m contour, >10 values both in info tool and value tool)</p>

#1 - 2014-10-23 01:04 PM - Jürgen Fischer

- Category set to Rasters

#2 - 2014-12-02 08:38 PM - Miroslav Umlauf

- File wrong_value.png added

Still the same issue in master. Any chance to get this updated? It has obviously to do something with wrong handling of values - "Float" in python?

#3 - 2014-12-03 12:38 AM - Giovanni Manghi

- Affected QGIS version changed from 2.4.0 to master

- Priority changed from High to Normal

#4 - 2017-05-01 01:08 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#5 - 2019-03-09 04:09 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
