

QGIS Application - Bug report #11102

Save vector layer as ... csv : bad output file when choosing export wkt geometry

2014-08-26 03:42 AM - Harrissou Santanna

Status: Closed	
Priority: Normal	
Assignee:	
Category:	
Affected QGIS version: 2.4.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: up/downstream
Crashes QGIS or corrupts data: No	Copied to github as #: 19433
Description	
<p>Right click on a polygon vector layer > Save as... delimited text file keep "avoid attribute creation" unchecked check "add saved map to canvas" choose in the layer options As_Wkt for the geometry. I left all the other options by default (no csvt, comma separated, no write_Bom, default lineformat). Save.</p> <p>I got a csv I can't understand the structure (see the attached file). From 29 features in my shapefile, the csv create 15 lines. I try to add the csv file as layer with the "add delimited text layer" tool but can't find the good combinations to get the same structure as my shapefile.</p> <p>In the file attached, if I choose "csvt : yes" when saving, the gid field is even empty in the csv.</p> <p>Am I doing something wrong? I'm on Windows 7.</p>	

History

#1 - 2014-10-10 07:13 AM - Giovanni Manghi

- Resolution set to up/downstream
- Status changed from Open to Closed

This was a bug in gdal/ogr, fixed in gdal/ogr 1.11.1
