Easy fix?:	No	**Copied to github as #:**	19436

Description

There is no feedback whilst reading very large delimited text files (e.g., files with several million points). When reading such large files the user should be presented with a "percentage completed" modal dialog, perhaps even with a running average estimation for completion.

This should be trivial to implement given that one can query the file size ahead of time and then return as a percentage the current file read pointer offset.
