Description

Hello, I've recently installed QGIS 2.4 on Windows 7 (64bit). Before installing, I disintalled the previous version and also deleted the "C:\\Users\\.... username... \\.qgis2   folder.

QGIS is working but I have a bug with the Scale Box: when I select for example scale 1:100,000 the resulting scale after clicking is 1:90,279. The same apply for any other scale provided in the dropdown list and also if I type a custom scale (e.g: I've just typed 1:15000 .... resulting in 1:11,284).

Many thanks.
ragards, Marco
