Description

I'm getting this error trying to build qgis from the master branch:

```
sip: Unable to find file "QtCore/QtCoremod.sip"
```

```
make2: * [python/core/sip_corepart0.cpp] Error 1
```

```
make1: * [python/CMakeFiles/python_module_qgis__core.dir/all] Error 2
```

Here's the cmake output:

```

- *Resolution set to invalid*

- *Status changed from Open to Closed*

Installing "python-qt4-dev" package fixed the build issue for me.

I guess cmake should complain about the missing dependency.

Should I file another ticket for that ?
