

QGIS Application - Bug report #11220

SVG marker not removed from arrow in composer

2014-09-17 02:10 PM - Spencer Gardner

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Affected QGIS version:	2.4.0	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 19530
Description		
<p>If I add a custom SVG marker to my composer there is no way to remove it again without permanently moving to the default or None. For example, I accidentally assigned my custom marker to the start of the arrow instead of the end. When I removed the path from the text box for the start marker and copied it to the text box for the end marker, my arrow had my custom marker on both ends. My only options for removing the marker from the start of the arrow are to delete the arrow and start over, stick with the default arrow head, or have no arrow heads on either end. Switching off of the SVG option and then returning does not solve the issue.</p>

Revision 9d0b83ab - 2014-10-19 03:31 AM - Nyal Dawson

[composer] Allow removing svg markers for arrows (fix #11220)

Previous behaviour was that if the start or end marker was cleared than the old marker was drawn. This made it impossible to remove an svg marker from the start or end of the line after one had been assigned.

Also fix a Qt warning caused by trying to draw markers if the marker size is set to 0.
