seems to be the case under both Win and Linux

#2 - 2014-09-19 11:35 AM - Alexander Bruy

- Affected QGIS version changed from 2.4.0 to master
- Priority changed from Normal to Severe/Regression
- Target version set to Version 2.6
- Operating System set to all

Confirmed. After loading there are no visible features on map, but map extent is correct, attribute table is correct and I can identify (invisible) features with identify tool. Turning on/off simplification, caching and threaded rendering does not helps.
