

QGIS Application - Feature request #11234

Optionally embed SVG symbols into style definition

2014-09-19 04:28 PM - Evan Derickson

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:		Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 19541
Description		
<p>When exporting styles using the Style Manager, the user should be able to embed the source of any SVG markers directly into the XML style document. Currently, the style document will externally reference the SVG location, but this makes it harder to distribute styles to other users. Obviously, embedding the complete source of an SVG into the XML will increase the latter's file size.</p>
