QGIS Application - Bug report #11263
add map to composer do crash

2014-09-24 02:17 AM - gillian milani

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Map Composer/Printing		
Affected QGIS version:	master	**Regression?:**	No
Operating System:	ubuntu	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	invalid
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	19562

Description

From archive, it's seems to be a recursive bug. First, i wanted to open a 2.3 qgs with 2.5; and it made crash. Then I saw it could be good to remove map composer when changing versions. It does solved the problem. But I search a little bit more and I realized that adding a map to a composer make crash 2.5.

gdb when adding map to composer:

...
[Inferior 1 (process 8787) exited with code 0177]

History

#1 - 2014-09-24 03:21 AM - Nyall Dawson

- Status changed from Open to Feedback

Can you please attach the project which causes the crash?

#2 - 2014-09-24 03:39 AM - gillian milani

- File testComposer.qgs added

I cannot spread the original project. But i've created one with the same behavior (which seems to be linked to composer). I've created it with 2.4 and it crashes with 2.5.

#3 - 2014-09-24 03:21 PM - Nyall Dawson

I can't reproduce the crash - this project opens without issue for me.

#4 - 2014-09-24 11:20 PM - gillian milani

- Target version changed from Future Release - High Priority to Future Release - Lower Priority

So seems to be local...

from gdb :
    ...
    Program received signal SIGSEGV, Segmentation fault.

QDomDocument::createElement (this=0x1, tagName=...) at dom/qdom.cpp:6916

6916   dom/qdom.cpp: No such file or directory.

Do you have some hints about where can be the problem ?

#5 - 2014-09-24 11:24 PM - Nyall Dawson

No idea sorry - maybe try reinstalling qt?

#6 - 2014-10-02 04:06 PM - Nyall Dawson

- Resolution set to invalid

- Status changed from Feedback to Closed

Seems to be a local problem, closing.
