### Description

In qgis master, sizing the composer legend items using the mouse it's possible to set it's size smaller than the actual items inside. This can lead to improper alignment with other items and it's impossible to "snap" it to the smallest needed size.

To replicate, just try to resize the legend item to a size as small as possible. Also see the attached image.

Feels like a regression to me, so I marked it as Blocker.
