

QGIS Plugin Site - Bug report #11412

Error messages are shown in the wrong place

2014-10-14 01:30 PM - Tim Sutton

Status: Closed	
Priority: Normal	
Assignee: Alessandro Pasotti	
Category:	
Pull Request or Patch Supplied: Yes	
Description	
Hi Ale	
Currently when there is a problem with one of the field values in the manager the validated form that is returned shows the error message next to the wrong field. For example if I use	
<code>git://github.com/kartoza/sg-diagram-downloader.git</code>	
for the git repo url on this page:	
http://plugins.qgis.org/plugins/SGDiagramDownloader/update/	
Then I get an error message above the word "Code repository:" so that it looks like the error actually relates to the previous field. Changing the Core Repository text to this allows the form to validate:	
http://github.com/kartoza/sg-diagram-downloader	
But based on the placement of the error message, the user will probably never realise that.	
As an aside, it would be nice to also support <code>git://</code> and <code>git@</code> url schemes for the git repo.	

History
