I still have issue with this. If I choose a name like "prova" and an autofil with layer name (pt1, pt2 etc.), I get provpt1a, provpt2a etc.

this issue is the same as #8511 but in that case (using the batch mode + autofill) is fixed for me on master (also when running models in batch mode). Do you have any "processing" folder inside .qgis2/python/plugins ?

Nope, clean config. Movet to #8511
