Crashes QGIS or corrupts data:	No	Copied to github as #: 19735
Description		
<p>In Print Composer, if a legend is using filter my map content try to edit one of the legend elements might lead to undesired results. This is true for both editing the label, deleting legend items or reordering it.</p> <p>In the images below I have tried to change a item "RECOLTE" name to "RECOLTE_2", and as you can see it changes another item instead. I believe this is something to do with the legend item index, since the item I was trying to edit is in the third line when the legend is filtered, and the edited item is in the same position when the legend is not filtered</p> <p>To replicate, create a categorized view of any layer and create a map with it. Filter legend to map content and zoom to an area where some categories are filtered. Now try to edit labels, delete items or reorder them.</p>

- Priority changed from Severe/Regression to High

Lowering priority as this is not a blocker (editing works when filtering is turned off)

Same issue in 2.6.1

When I edit a filtered version of the legend, it acts as if it is unfiltered

Having a list with 4 posts

Filtering and now see post 1 and 4 - viewing only 2 posts  
Try to edit post 4 - nothing change  
Unfilter and post no. 2 has the changes.
