

QGIS Application - Feature request #11497

QGIS wfs-t server: cannot modify/add features if they have many nodes, necessary to raise the maximum body size of a HTTP request

2014-10-25 06:54 AM - Giovanni Manghi

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Documentation and Help	
Pull Request or Patch supplied:		Resolution:
Easy fix?:	No	Copied to github as #: 19767
Description		
<p>In the latest qgis server versions if a feature has many nodes then modifying it or adding new one will fail if it has many nodes.</p> <p>Errors: ERROR: 1 geometries not changed.</p> <p>Provider errors:</p> <p>empty response</p> <p>Simplified/generalized versions of the same feature will be saved with no problems.</p> <p>It seems it is not a wfs client issue as the same feature will edit with no problems if published with geoserver.</p> <p>I can't remember to have seen this issue in older qgis/server releases, but as I'm not 100% sure I'm not tagging this as a blocker.</p>

- Status changed from Open to Feedback

Cannot reproduce.

the words "many nodes" do not permit a precise identification of the feature causing the problem.

Can you please add a test project with the minimum feature set to reproduce the issue?

yes I can provide a test server, but only later during the day.

cheers!

- *Category changed from QGIS Server to Documentation and Help*
- *Subject changed from QGIS wfs-t server: cannot modify/add features if they have many nodes to QGIS wfs-t server: cannot modify/add features if they have many nodes, necessary to raise the maximum body size of a HTTP request*
- *Tracker changed from Bug report to Feature request*

it turns out that is necessary to raise the maximum body size of a HTTP request, like

```
<IfModule mod_fcgid.c>  
    FcgidMaxRequestLen 26214400  
    FcgidConnectTimeout 60  
</IfModule>
```

better add a note in the docs.
