

QGIS Application - Bug report #115

Can't open vector file(s)

2006-05-14 08:16 AM - moritoru-orkney-co-jp -

Status: Closed	
Priority: Low	
Assignee: Gary Sherman	
Category: Vectors	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: wontfix
Crashes QGIS or corrupts data:	Copied to github as #: 10174
Description	
<p>When I tried to open shape files with qgis-0.8.0-preview-win32 on my Win2000Pro(Japanese), QGIS failed to open it and then automatically crashed. I tried it with QGIS demo data (without Jpananes fonts), Japanese data (with Japanese fonts) and Thai data (with Thai fonts) but their results were the same.</p> <p>I tried it with my [[WinXPPro]](SP2)(Japanese) for those three types shape files, however, the results were the same.</p> <p>The bottome line is that QGIS0.8.0 runs on my PCs couldn't open any vector files and it always crashed.</p> <p>Also I found that it couldn't open any .qgs files that was created in 0.7.3 as well.</p>

I myself found the way to escape this problem.

Put the qgis module into a folder without using double byte characters name in path, then qgis runs fine as attached image (qgis080.jpg).

Some users tend to install software program(s) into a path using double byte characters set so the bug should be fixed anyway.

#2 - 2006-08-16 06:12 AM - Redmine Admin

Concerning your second point (couldn't open any .qgs files that was created in 0.7.3), this is normal (format of qgs files has changed betwee 0.7 and 0.8)

Is this ticket still a problem?

#4 - 2006-10-21 08:03 AM - Gary Sherman

- Status changed from Open to Closed

- Resolution set to wontfix

#5 - 2006-10-21 08:04 AM - Gary Sherman

Add to install documentation

#6 - 2009-08-22 12:46 AM - Anonymous

Milestone Version 0.8 deleted
