

QGIS Application - Bug report #11618

Layer disappears at some scales with shapeburst and inverted polygons

2014-11-11 01:18 PM - Spencer Gardner

Status: Closed	
Priority: Normal	
Assignee:	
Category: Symbology	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: end of life
Crashes QGIS or corrupts data: No	Copied to github as #: 19872
Description	
<p>See bug #11594 for additional background.</p> <p>I have a multipolygon layer on which I have applied an inverted polygon symbology with a shapeburst fill. At certain scales, the layer disappears from the canvas. In my latest testing, it was visible up until I zoomed out to about 1:110,000 and would reappear at about 1:650,000.</p> <p>The disappearance does not occur if the layer is symbolized using a simple fill.</p>	

History
