

QGIS Application - Bug report #11622

Crash with new feature selecting a polygon between some layers with right click

2014-11-12 02:16 AM - Alex Medina

Status: Closed	
Priority: High	
Assignee:	
Category: Map Canvas	
Affected QGIS version: 2.6.0	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Crashes QGIS or corrupts data: Yes	Copied to github as #: 19875
Description	
<p>Hello!</p> <p>When i use the new 2.6 Brighton feature "selecting an object between some layers through right click" the programme uses to crash. I see 3 different cases:</p> <p>1_ It crashes after showing this message: "bad allocation"</p> <p>2_ It crashes after showing this message (spanish and english): "Volcado fallido: la escritura del minivolcado a C:\Users\xxxxx\AppData\Local\Temp\qgis-20141112-105056-2980-3304-exported.dmp falló (80070008)" In english should be something like: "memory dump failed: writting minidump to C:\Users\xxxxx\AppData\Local\Temp\qgis-20141112-105056-2980-3304-exported.dmp failed (80070008)"</p> <p>3_ Sometimes it just crashes without any message.</p> <p>I'm very surprised with this issue because with 2.4 version "Chugiak" i did never (and i really mean never) suffer a programme crash. I used to love QGIS for that!</p> <p>Thanks for all your work and support,</p> <p>Alex</p>

are you working within a project originally made in qgis 2.4?

anyway it is not clear to me what is the operation I would need to replicate the issue, can you detail more and add sample data? thanks!

- File Figure_02.jpg added

- File Figure_01.jpg added

Hi Giovanni! Thank for your answer.

Yes, i'm working with a qgis 2.4 project but opened and saved in qgis 2.6.

Ok, trying to be more clear:

When i use "spatial object identification" (see Figure_00.jpg attached), and click right button over an object (Figure_01.jpg) the programme crashes as i explained before.

Figure_02 is case 3 (crashes without any message)

Hope i've been more clear this time!

Thanks a lot

#4 - 2015-12-27 04:11 AM - Giovanni Manghi

- Resolution set to fixed/implemented

- Status changed from Feedback to Closed

there was an issue (causing a crash) with the right click identify on map canvas, but this was solved around the time this ticket was filed (but that I can't find it right now). I believe this could be the same thing, so I'm closing it as it does not seems replicable in the latest qgis releases.

Please reopen if is not the case.
