

QGIS Application - Feature request #11652

Add support for Oracle and SQL Server to DB manager

2014-11-15 02:36 PM - David Pavlicek

Status:	Closed	Resolution: duplicate Copied to github as #: 19904
Priority:	Normal	
Assignee:		
Category:	DB Manager	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
Please, add support for Oracle and SQL server to DB manager. Without this, there is no simple way how to query/create/delete/manage tables in these databases.

Me too I would favour to add support for MS SQL Server into the DBManager. In that way it would be possible to use stored procedures or (table-producing) functions which already exist in the database. Now via Add SQL Server layer one is limited to the use of tables and views. Sometimes special Views need to be created just for use of the same data as in the non-Gis-interfaces. And that's a double.

At my job we use one SQL-Server database for non-spatial retrieving of data (filling the database with SQL-Server-linked Access-front-end) and viewing and filling the database from QGis on. Works fine, but no stored procedures/functions accessible from QGis.
