QGIS Application - Bug report #11684
After splitting a feature only one of the parts shows in table as "show edited and new features"

Crashes QGIS or corrupts data:		**Copied to github as #:**	19928	

Description

Usually after a split is necessary to fix/change the attributes of both the newly formed features and the original feature. As after the split QGIS does not show any attributes form then the workaround is to tell the table of attributes to "show edited and new features", but only one record shows, the one of the new feature, the one of the other (edited) features does not (probably because the feature in not marked as edited).
