Changing line 52 in JoinAttributes.py seems to fix it:

        self.addParameter(ParameterVector(self.INPUT_LAYER_2, 'Input layer 2',
                [ParameterVector.VECTOR_TYPE_ANY], False))

It would basically revert https://github.com/qgis/QGIS/pull/1498/files

Seems like the underlying issue is that ParameterTable does not equal ParameterVector + tabular data?

I would really like the main developers to shed some light on this issue.
