Thanks for the proposal Tom! My concerns with the initial proposal would be

  - using the magnifying glass which otherwise stands for zooming in a different context
  - reliance on text in the icon which otherwise looks like the Add WMS layer icon

Good point.  Options:

- magnifying glass without the + sign
- replace magnifying glass with binoculars (do we have any SVGs with binoculars in QGIS which we can reuse/borrow?)
- something else?

True.  Any ideas/options would be valuable.

I've posted another icon with (still) the WMS globe but glasses (from the overview icons) for review/comment in

Thanks Tom, I think that's going the right direction. Have you tried some binoculars, like you previously mentioned? e.g.
https://thenounproject.com/search/?q=binoculars#

I see that you reused the glasses from the overview icons. If I remember correctly, there's a recent discussion on the mailing list about removing the
overview menu entries at least. If all overview icons are thrown out, I guess it would be fine to reuse the glasses as a "search" symbol. Otherwise, maybe
lets try your initial binocular idea.
