| <b>Description</b>                                                                                                                                                                                                                                                                                                      |                                     |
| <p>1. Open the attached shapefile in QGIS. 5 points show up.</p> <p>2. In layer properties set scale to field 'scl' and choose rhombus or filled triangle symbol.</p> <p>3. Apply - the point in the very bottom dissapears.</p> <p>For other symbols it always remains visible though, as a single pixel at worst.</p> |                                     |
