

# QGIS Application - Bug report #11908

## Polygon shapefile not displaying at small scales

2014-12-22 12:12 PM - Matt Dallaire

<b>Status:</b> Closed	
<b>Priority:</b> High	
<b>Assignee:</b>	
<b>Category:</b>	
<b>Affected QGIS version:</b> 2.6.1	<b>Regression?:</b> No
<b>Operating System:</b> Windows 7	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b> No	<b>Resolution:</b> invalid
<b>Crashes QGIS or corrupts data:</b> No	<b>Copied to github as #:</b> 20118
<b>Description</b>	
When zooming into a shape file polygon, certain polygons disappear as you zoom in. The polygons that disappear also are not identifiable with the Identify Features tool at any scale.	

### History

#1 - 2014-12-23 06:49 AM - Giovanni Manghi

- Resolution set to invalid
- Status changed from Open to Closed

you have corrupted spatial indexes. Delete the sbn/qix files, and then eventually regenerate the index (in vector properties > general), and you are good to go.
