

QGIS Application - Bug report #11926

Change the configuration directory location to the new standard

2014-12-29 09:52 AM - Bogdan Hlevca

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	2.6.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 20135
Description		
<p>Currently QGIS stores its configuration and history settings in \$HOME/.qgis2 directory.</p> <p>This is an obsolete standard that pollutes the home directory of the user with hundred of files.</p> <p>The new XDG standard is to put such files in a common place ~/.config and ~/.local that will mean tha QGIS sohould put its configuration files in ~/.config/qgis2 and other things in ~/.local/qgis2 as it is documented in the documented below.</p> <p>[[https://wiki.archlinux.org/index.php/Xdg_user_directories]]</p> <p>More and more applications do that. Please help the Linux community to have a clean home directory. Thanks.</p>		

History

#1 - 2017-05-01 01:07 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

#2 - 2019-03-09 03:12 PM - Giovanni Manghi

- Resolution set to end of life
- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
