Description

When using a lot of layers, it becomes annoying to set snapping options.
For example: If just one layer should have snapping, you have to deselect all others by clicking each. Or if all layers should have snapping, you have to select all one by one.
Sometimes you want to snap all points shapes or just want to disable snapping at all.

So I would like to have 5 predefined 5 options:

Seclect all
Deselect all (no snapping)
Select all line shapes
Select all point shapes
Select all polygon shapes
