

QGIS Application - Feature request #1195

Option to load multiple grass rasters

2008-07-31 11:09 AM - jaadfoo -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: GUI	
Pull Request or Patch supplied:	Resolution: duplicate
Easy fix?: No	Copied to github as #: 11255
Description	
<p>The current dialog box for loading GRASS raster files only allows the selection of one file. This is very inefficient if you have a large tiled data set and don't want to go through the process of merging just for display. I would like to see a more standard dropdown which allows the standard shift or ctrl select range options.</p>

FYI you can also use the GRASS toolbox's browser to add GRASS layers, which is more efficient.

Please close the bug, if you feel that it is efficient enough.

That certainly is an improvement, but still requires the user to double click every raster individually. It also requires the user to open the mapset, which outside of win causes a lock issue doesn't it? I can't verify as I'm running grass on dapper with an old version of qgis. It would be nice to open a grass raster for viewing while having a grass session open also.
