

QGIS Application - Bug report #11971

MSSQL data with Z and M where Z is NULL wont display

2015-01-08 10:44 AM - westy Vw

Status: Closed	
Priority: Normal	
Assignee:	
Category: Data Provider/MSSQL	
Affected QGIS version: 2.6.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution:
Crashes QGIS or corrupts data: No	Copied to github as #: 20178
Description	
<p>If the Z value is NULL in a MSSQL Linestring or Point geometry, the table will load but the data will not display. Since MSSQL must have a value for Z if you have a value for M because the format is POINT (X Y Z M), it is possible to use NULL for the Z when there is an unknown value.</p> <p>This happens frequently, due to the fact that MSSQL is often used with ESRI products which writes NULL for Z when Z is unknown and M is known.</p> <p>Example geometry data:</p> <p>POINT (1199100.2299588919 880237.32388755679 NULL 4.2200000000011642)</p>
