<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 11264

### Description

It would be helpful to be able to see the displayed coordinates of the map in different coordinate systems. At the moment coordinates are displayed only in one form and system in the status bar. When you are using different projected systems or/and the geographic coordinates it would be nice to have access to them at the same time in one QGIS project.

For example the system could show coordinates in the system set by the user and a second one, which, by default, could be geographic (longitude, latitude) but can be configured by the user to be set to another system.

### History

#### #1 - 2008-08-06 05:21 PM - Tim Sutton

- Resolution set to fixed
- Status changed from Open to Closed

Implemented all these features and a few more in the new Coordinate Capture plugin I have written. Available as of commit:59be558a (SVN r9013).
