**Description**

Hi,  
all is in the title.  
When you filter a layer (Layer Properties > General > Query builder) you still can join another layer's fields.  
But if you first join the layer, there is no way to filter it. Query Builder is greyed. It should be possible to still filter it and even better if appended fields can be used....

- Status changed from Open to Closed

I can't find the commit that solves it but this works in master (maybe already in 2.10 ): it's possible to filter an already joined layer.

So i close it.
