Status: Closed	
Priority: Normal	
Assignee:	
Category: Map Composer/Printing	
Affected QGIS version: 2.6.1	Regression?: No
Operating System: Mac OS X	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: end of life
Crashes QGIS or corrupts data: No	Copied to github as #: 20291

Description

I have this map project where I use Map Unit as the unit for all my lines and markers etc (instead of millimeters because I want a good preview of how it will look like exported). When I export the map to SVG using the print composer, the line widths change for each map export!

The same map with different extents render a line with the width "1.18116" in one extent and the other extent show "1.18114". I know it's not a huge difference but since Illustrator CC doesn't get the line widths right when importing my SVG:s from QGIS I have to search and replace the values in the SVG before importing to Illustrator. But since these values change all the time I can't make a nice script translating.

I guess the SVG export -> Illustrator CC is a bug in Illustrator or does it have something to do with QGIS? I'll create another ticket so we can discuss that there.
