

QGIS Application - Bug report #12113

Actions launched from attributes table does not work if field has a "hidden" widget.

2015-02-02 04:08 AM - Julien Perrot

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Attribute table	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 20307
Description		
<p>Hello everybody,</p> <p>A little bug existing since some version of QGIS (since 2.2 at least) :</p> <p>When a custom action created from the configuration menu of a layer is defined, and use an attribut, the action works weel when using the geographic interface (choosing "action tool" and clicking on the geographical entity on the map). But when opening attributes table, clicking right on a line, and choose my custom action, it is like every attribute used is empty.</p> <p>Sample :</p> <p>My action call :</p> <pre>load(QUrl("http://blablabla/test.edit.php?id=[% "gid" %]"));</pre> <p>In the map case :</p> <p>"http://blablabla/test.edit.php?id=145" is loaded in my browser</p> <p>In the attributes table case :</p> <p>"http://blablabla/test.edit.php?id=" is loaded in my browser (and doesn't work, obviously)</p>

- Status changed from Open to Feedback

I cannot confirm after having tested on QGIS master on both linux and windows. Please give it a try and report back.

#4 - 2015-02-04 07:19 AM - Julien Perrot

OK, I manage to point the exact problem :

The field "gid" I want to use is setted as "Hidden" in the fields properties tab. It's only in that case that the problem occurred.

So I know how to avoid the problem (by changing the field type), but according to me, the feature has to work the same on both cases (map and attributes table).

Thanks for your work !

#5 - 2015-02-05 01:55 AM - Giovanni Manghi

- Status changed from Feedback to Open
- Subject changed from Custom actions launched from attributes table can't use attributes to Actions launched from attributes table does not work if field has a "hidden" widget.
- Assignee deleted (Matthias Kuhn)
- Affected QGIS version changed from 2.6.1 to master
- Operating System deleted (Windows 7)
- Priority changed from High to Normal
