

QGIS Application - Feature request #12121

dbManager: store queries also globally

2015-02-04 01:22 AM - Stefan Blumentrath

Status:	Open	Resolution: Copied to github as #: 20315
Priority:	Normal	
Assignee:		
Category:	DB Manager	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>PostGIS/Spatialite queries are often written project specific. However, they might also be re-purposed in other projects / contexts or by other colleagues (the "share your code" idea), so similar projects do not have to start from scratch. In order to be able to share queries more simply among projects or colleagues (e.g. as a kind of templates for more general purpose queries) it would be useful if dbManager could store queries also globally and not only within QGIS project files (as it is the case at the moment).</p>
