Got master/latest from git. Still not compiling for me. Perhaps I need a QWT library based on QT5? Would QWT6 do better? I think that I tried that one and did not compile

Yes, you will need to build against a QWT library compiled and linked against Qt5.

I think QWT 5 does not build against Qt5.

QWT 6 does build against Qt5. But be aware that the one provided by your distro may be linked against Qt4.
