Easy fix?:	No	**Copied to github as #:**	20357

Description

I just thought I'd submit a feature request as an improvement to the batch processing interface that I would certainly find useful and I'm sure other people would too.

It'd be really nice if the layer selection dialog in batch processing respected the groups defined in the layer window, or at least enable some sort of ordering. At current it is quite hard to efficiently batch process files with variable file names which are arranged into groups in the project.

I hope that would be useful to other people too!
