Easy fix?:	No		**Copied to github as #:**	20374

Description

QGIS can't catch "Raise Warning" and "Raise Notice" messages from PostGIS(while editing PostGIS-Layers) from a PostgreSQL/PostGIS-Trigger-Function within QGIS. One example: I have a trigger that reacts to insert or update-events and sends back notices to the client.In QGIS i just get messages from raise exeption but not notices or warnings. I think this is a very important functionality to be able to use QGIS in combination with postgis databases.

History

#1 - 2015-02-15 03:11 AM - Jürgen Fischer

- Resolution set to fixed/implemented

- Target version set to Version 2.8

- Status changed from Open to Closed

- Category set to Data Provider/PostGIS

implemented in commit:b2cfe0b330
