

QGIS Application - Bug report #12193

Problem with update a sql query in DBManager

2015-02-12 11:30 AM - Pedro Venâncio

Status:	Closed	
Priority:	High	
Assignee:		
Category:	DB Manager	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 20383
Description		
<p>In DB Manager -> SQL Window, if you write a SQL query, run and then change some parameter, making the selection with the mouse, the query does not work/update. On the other hand, if you delete and write the new parameter, then it works. In other words, you must move the cursor with the keyboard.</p> <p>I made a short screencast because it is not very easy to explain. The first example in the video is with QGIS 2.6.1 and the second with the Master.</p> <p>https://dl.dropboxusercontent.com/u/5772257/qgis/dbmanager_sql_window.avi</p> <p>So it is a regression, but nothing serious.</p> <p>Tested in Windows (OSGeo4W 64bits) and Linux.</p>

Fix #12193 - problem with update of SQL query in DB manager

In the scenario described in the bug report, the selected text was empty,
but editor's hasSelectedText() would still return True
