QGIS Application - Bug report #12214
Clipped Feature Symbology

2015-02-16 08:03 AM - Joseph Krienert

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Symbology			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	end of life	
Crashes QGIS or corrupts data:		**Copied to github as #:**	20402	

Description

With an equidistant point array represented by square 'icons' that are all rotated to a specific degree - there is significant clipping of the symbols.
Please see attached image.

Is this a bug, or rather influenced from possible missing commands in (my) symbol properties routine?

History

#1 - 2015-02-16 08:51 AM - Joseph Krienert

For futher detail - the attach imaged has a green region, which is the info-tool selection. All yellow points are the virtual points represented by the square symbology. The red-dot outline is the supposed region of clip error.

#2 - 2015-02-21 04:01 PM - Anita Graser

- Priority changed from Low to Normal

I can confirm this issue with the square symbol. Maybe try the diamond shape as a workaround.

#3 - 2017-05-01 01:07 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#4 - 2019-03-09 04:09 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
