Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Web Services clients/WFS	
Affected QGIS version:	master	Regression?: No

Crashes QGIS or corrupts data:		Copied to github as #: 20441
Description		
<p>When I remove a WFS layer from the table of contents the application crashes. I'm using Windows 7. This occurs on the 2.8 release as well as the latest nightly.</p> <p>For reference, I'm using the WFS at this location: http://wfs.ksdot.org/arcgis_web_adaptor/rest/services/Accident/Accidents_WFS/MapServer/WFSServer</p>		

History

- #1 - 2015-02-24 12:08 PM - Giovanni Manghi
- Subject changed from Removing WMS layer from TOC crashes QGIS to Removing WFS layer from TOC crashes QGIS
 - Status changed from Open to Feedback
 - Operating System deleted (Windows)
 - OS version deleted (7)

Is the ticket about wfs, not wms, right?

I confirm the crash with this particular service, but not others.
Did it worked ok in previous releases?

Correct - WFS. Sorry for the typo.

WFS worked well for me in previous releases but I hadn't tried this particular WFS endpoint until after I upgraded to 2.8.

I tried to save one of the layers as spatialite. But it came up with an error:

Export to vector file failed.

Error: Feature write errors:

Feature creation error (OGR error: sqlite3_step() failed:

Seems to be a problem with a feature. But still, crashing should not happen.
