

QGIS Application - Feature request #12326

export only values of symbology between layer of different geometries

2015-03-06 01:11 AM - matteo ghetta

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:		Resolution:
Easy fix?:	No	Copied to github as #: 20504
Description		
<p>Since it is impossible to copy and paste styles from different geometry layers (so from a polygon to a point for example) it would be nice to export just the values of the symbology.</p> <p>As a short example: one has a polygon layer with a customized graduated scale (each value has been added manually) and another point layer with a similar attribute table (field name of classification are the same).</p> <p>It would be nice to be able to export the customized values from the polygon to the point.</p>
