

QGIS Application - Bug report #1233

EPSG code assigned to temporary object

2008-08-21 03:28 PM - Mateusz Loskot -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: C++ Plugins	
Affected QGIS version:	Regression?: No
Operating System: OS X	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 11293
Description	
In file [source:trunk/qgis/src/plugins/wfs/qgswfssourceselect.cpp@9108#L100 qgswfssourceselect.cpp], lines 100-105 look like this: <pre>int [[ProjectCRS]] = -1; if(projectRefSys.isValid()) { long [[ProjectCRS]] = projectRefSys.epsg(); }</pre>	
The value returned from epsg() function is assigned to temporary [[ProjectCRS]] - local in scope bounded by parenthesis - that overrides the [[ProjectCRS]] variable assigned in outer scope.	
It's very likely a logical bug.
