| Status: Closed | |
| Priority: Normal | |
| Assignee: | |
| Category: Field calculator | |
| Affected QGIS version: 2.6.1 | Regression?: No |
| Operating System: Win XP | Easy fix?: No |
| Pull Request or Patch supplied: No | Resolution: fixed/implemented |
| Crashes QGIS or corrupts data: Yes | Copied to github as #: 20514 |

Description

Only on 2.6, works on 2.8

Using a POstGIS layer, using the Field Calculator to update a selection of geometry. This does nothing, and corrupt the layer so that even closing/reloading the project the layer is still corrupted. One has to manually delete and reimport the layer to work with it again.

History

#1 - 2015-03-09 06:18 AM - Giovanni Manghi

- Status changed from Open to Feedback

I don't think there will be backports for 2.6, so if it works in 2.8 this should be closed, agree?

#2 - 2015-03-09 01:12 PM - Nyal Dawson

- Resolution set to fixed/implemented

- Status changed from Feedback to Closed

If it's fixed in 2.8, this can be closed
