

QGIS Application - Feature request #12359

Add default OSM styles

2015-03-11 09:16 AM - Paolo Cavallini

Status:	Open	Resolution: Copied to github as #: 20534
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
Some more default styles could be added to standard package. Several candidates are available, e.g. https://github.com/charleyglynn/OSM-Shapefile-QGIS-stylesheets http://anitagraser.com/2012/02/25/light-styles-for-osm-layers-in-qgis/ etc.		

History

Do you mean symbols or styles? Styles depend a lot on the lineage of the OSM data (Shapefile export, SpatiaLite from ogr2ogr, ... all different).

#2 - 2015-03-12 12:39 AM - Paolo Cavallini

I mean both, with a focus on styles. I understand there are different export methods. I think we could choose one, and add the styles adapted to it. Geofabrik seems a good candidate.

#3 - 2015-03-13 12:15 PM - Anita Graser

Do we already ship whole styles with QGIS? How will the user know that there is a style e.g. for OSM Shapefiles from Geofabrik?

#4 - 2015-03-13 12:19 PM - Paolo Cavallini

I think adding symbols would already be a good step forward. Adding styles would be an useful improvement. We could add a note in the manual about the usage of styles. The name could also help to figure it out (e.g. geofabrik_osm_polygon.qml).
Thanks for your thoughts.
