<b>Description</b>	
<p>This bug reports to my two prior bug reports of the scale dependent visibility of layer.</p> <p>While editing the min/max values of the scale dependent visibility I experienced the following errors:</p> <p>actual value: 1:5 000 editing the value to 1:5 0000 and pressing apply (which should result in 1:50 000); however result: 1:5 000 (nothing changes!).</p> <p>To change the value as desired to 1:50 000 you have to add the "0" right after the number "5" (1:50 000), which actually is the same as 1:5 0000!</p> <p>Same happens if you want to reduce the scale from 1:5 000 to 1:500. After deleting the last "0" (1:5 00) and pressing apply the value is reset to 1:5 000. To changed the value to the desired 1:500 you have to delete the space between "5" and "0". Also in this case, 1:500 should be the same as 1:5 00. It's just a matter of how the values are presented or formatted.</p> <p>It's not a major bug but an annoying one.</p> <p>I hope you can reproduce my bug.</p> <p>kindly, Pascal</p>
